Technology at work for you

CONNECTING YOUR BUSINESS TO THE TECHNOLOGY RESOURCES YOU NEED

In today's extended enterprises, business systems must be continuously available and provide high levels of performance and security for your customers and business partners even as the business grows and evolves. GCT take a proactive and comprehensive view of systems management to achieve high levels of system security, availability and performance in support of important business processes. Over the past 3 years, GCT has developed and refined comprehensive tools, processes, and staff for managing our

clients mission critical business systems 24 hours each and every day.

GCT was formed in 2003 by experienced IT and business consultants, who believe that value for money and excellent customer service is a pre-requisite in today's competitive IT industry.

IT ASSET DISPOSAL

This has become something of a headache for businesses now. This will allow you to dispose of your equipment within the specific laws of data protection and recycling. We destructively destroy all so it is irretrievable.

MANAGED SUPPORT SOLUTIONS

- INCIDENT MANAGEMENT
- PROBLEM MANAGEMENT
- CHANGE MANAGEMENT
- NETWORK MANAGEMENT
- ASSET DISPOSAL
- BRONZE SUPPORT
- SILVER SUPPORT
- GOLD SUPPORT
- PLATINUM SUPPORT

flexible solutions for your business needs

GCT CONSULTING PROVIDES A COMPLETE END TO END SOLUTION

CONSULTANCY SERVICES

Listed below are some of the companies we are strategically aligned with. This enables us to provide consultancy services that are purpose built, and provide our

customers with ability to deliver greater IT resource utilisation, high performance IP platforms, different services and applications at scale.

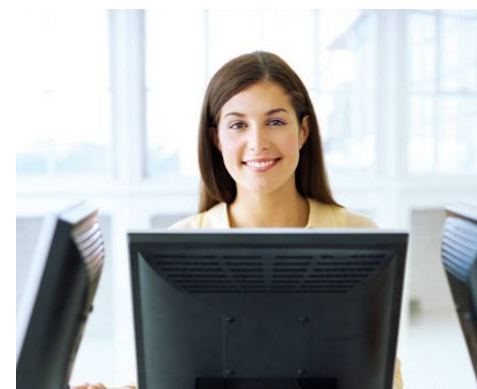

- Microsoft
- Cisco
- Citrix
- Juniper
- Virtuozzo
- VMWare

VIRTUALISATION AND CONSOLIDATION

In the 1990's researchers began to see how virtualization could solve some of the problems associated with the proliferation of less expensive hardware, including under utilisation, escalating management costs, environmental issues and vulnerability.

Benefits of virtualization

- Multiple applications and operating systems can be supported within a single physical system.
- Servers can be consolidated into virtual machines on either a scale-up or scale-out architecture.
- Computing resources are treated as a uniform pool to be allocated to virtual machines in a controlled manner.

CITRIX AND THIN CLIENTS

Citrix helps organizations to improve IT efficiency by consolidating systems and data under the central control of IT teams to accelerate application delivery and improve the security, availability, performance and management of enterprise resources.

Citrix improves IT efficiency and delivers substantial savings for customers.

EXTRANET/CO-LOCATION HOSTING

By placing your equipment in a data centre you will eliminate the need for expensive leased line circuits and associated networking equipment and therefore improve the performance, reliability and cost of the services you deliver.

REMOTE ACCESS

Almost every organisation needs to access corporate IT solutions from outside the office walls. Remote network and desktop access is universally required thus making the remote access security a Priority.
